

Which of the following reductions achieves the code-equivalence

$$\mathcal{R}_g \xrightarrow{\text{EVAL}} \text{Prf}_f^0 \xrightarrow{\text{GET}} \text{Key} \stackrel{\text{code}}{\equiv} \text{Gprg}_g^0 ?$$

(a)

$\mathcal{R}_g$

SAMPLE()

$y_L \leftarrow f(x, 0^{|x|})$

$y_R \leftarrow f(x, 1^{|x|})$

$y \leftarrow y_L || y_R$

**return**  $y$

Parameters

$\lambda$  : security parameter

Package State

no state.

(b)

$\mathcal{R}_g$

SAMPLE()

$x \leftarrow_{\$} \{0, 1\}^\lambda$

$y_L \leftarrow \text{EVAL}(x, 0^{|x|})$

$y_R \leftarrow \text{EVAL}(x, 1^{|x|})$

$y \leftarrow y_L || y_R$

**return**  $y$

Parameters

$\lambda$  : security parameter

Package State

$y$  : image value.

(c)

$\mathcal{R}_g$

SAMPLE()

**assert**  $y = \perp$

$y_L \leftarrow \text{EVAL}(0^\lambda)$

$y_R \leftarrow \text{EVAL}(1^\lambda)$

$y \leftarrow y_L || y_R$

**return**  $y$

Parameters

$\lambda$  : security parameter

Package State

$y$  : image value.
